

REMARKS

In the above-identified Official Action, objection was made to the listing of all Figures in the BRIEF DESCRIPTION OF THE DRAWING. All Figures are now presented.

Objections to the drawings are overcome by the deletion of items not found therein from the claims.

All of the rejected claims have been cancelled.

New claims 9 through 12 reflect subject matter found in U.S. Patent No. 6,411,512. The guts of the specification and the Figures from that patent have been inserted in the foregoing amendments into the present application. In the Official Action it is indicated that the patent 6,411,512 was not incorporated by reference into the specification. This is correct. However, the claims, now cancelled, specifically incorporated that patent. The claims are deemed to form part of the disclosure and subject matter may be drawn therefrom without being considered new matter. Consequently, appropriate support is now provided for claims 10 through 12.

The prior claims were rejected as unpatentable over U.S. Patent No. 5,731,954 to Cheon. With the further detail of the at least one heat pipe in each of the claims, neither a *prima facie* case of anticipation nor a *prima facie* case of obviousness is possible. The standards for such *prima facie* cases require that all elements of the claim be located in the applied references. The Cheon patent fails in that regard.

In view of the foregoing, reconsideration of the rejection is earnestly solicited.
